

# Our premium tile — innovative and closed loop

Billions of pounds of VCT and Drywall are discarded each year,  
making their way into America's landfills.

## VCT into VCT

Smart product design and investment in machinery and technology have enabled us to launch the industry's most progressive VCT into VCT recycling program.

- Our LOOP recycling program keeps this post-consumer material out of landfills by turning it into new high-performance products
- Mannington's premium tile products contain 10% post-consumer recycled content
- Exceptional visual and performance integrity

## Drywall into Flooring

Construction materials account for almost half of all landfill waste

- Drywall represents one of the largest components of construction waste
- Mannington Commercial has taken the industry lead in utilizing post-consumer drywall in our manufacturing process of premium tile
- Several tons of drywall each week are recycled into our premium tile products

**10% post-consumer tile**

## Choices that Sustain

Designing new products that not only have a bright future  
but also divert waste streams through progressive reclamation  
and closed-loop recycling programs.
