

MANNINGTON RESILIENT – Sobella  
SURFACES 2008 INTROS

**MANNINGTON ENHANCES POPULAR SOBELLA  
LINE WITH NEW PATTERNS FOR 2008**

Introduced in 2007, Mannington's Sobella™ glassback flooring took the market by storm, and went on to become one of the company's most successful product launches ever. This year, five new patterns will round out the product offering in this line, and fill the display to capacity, to provide retailers the opportunity for more sales and consumers the ability to choose a floor they love at a price they can afford.

The new patterns offer features and benefits that are uniquely Mannington: superior styling and design; Scratchresist and NatureForm Optix (on Sobella Supreme); SurfaceGuard and NatureForm (on Sobella Classic); NeverYellow; and Guardian protection. In addition, Sobella is made in the U.S. and comes as a standard 12 foot roll.

The designs range from realistic wood visuals to slates and stones that echo the beauty of their natural inspiration. They are:

**Sobella Classic:**

Jatoba: inspired by Brazilian Cherry with an intense under glow and a fine furniture-like visual that is extremely popular in hardwood flooring.

Cantabria: the look of refined limestone with an all-over layout and variation in veining.

**Sobella Supreme:**

Estonia: features a dramatic 18" tile format, and can create the perfect backdrop to any design style that requires a dramatic element.

Perugia: a unique modular configuration that combines an ancient marble with rectangular shapes and rectified grout lines.

Surfside: a 12" tile format with the characteristics found in sand and ocean, creating a moving effect which makes this pattern come to life.

All new Sobella introductions are currently available.
